

Sorry it took so long for me to get back with you. yes register. Then based on the icons at the top of the Avast screen... click on the home or menu icon, then click on scan-scan for viruses-put 'full scan' in the drop down... then at the bottom of the screen click on 'scan settings',

Make all screens look like the following:

Sensitivity

Packers

Actions

Performance

Report file

Exclusions

Scheduling

Sensitivity

Use the controls on this page to fine-tune the sensitivity of the scan and other parameters.

Heuristics

Heuristics sensitivity:  High

Use code emulation

Sensitivity

Test whole files (may be very slow for big files)

PUP and suspicious files

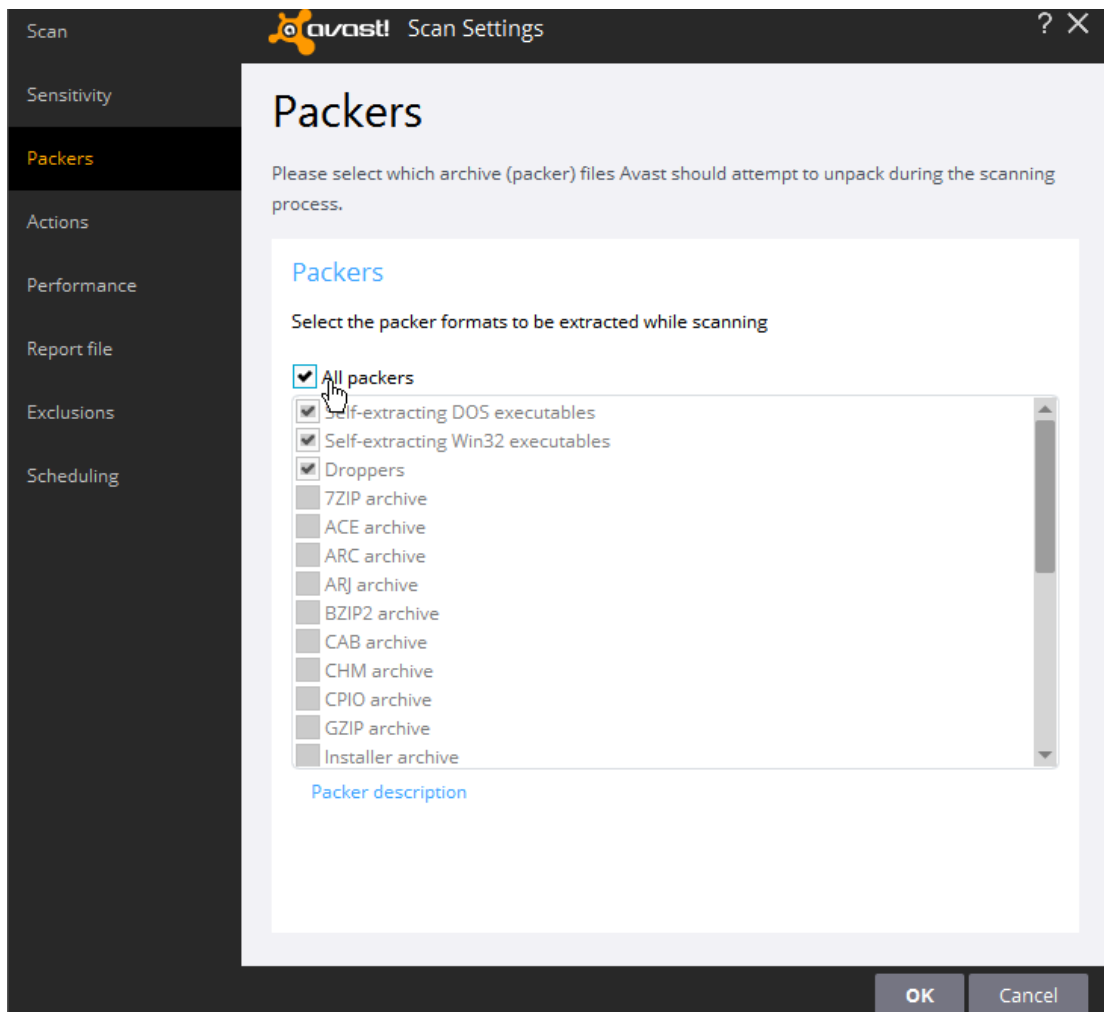

Scan for potentially unwanted programs (PUPs)

Links

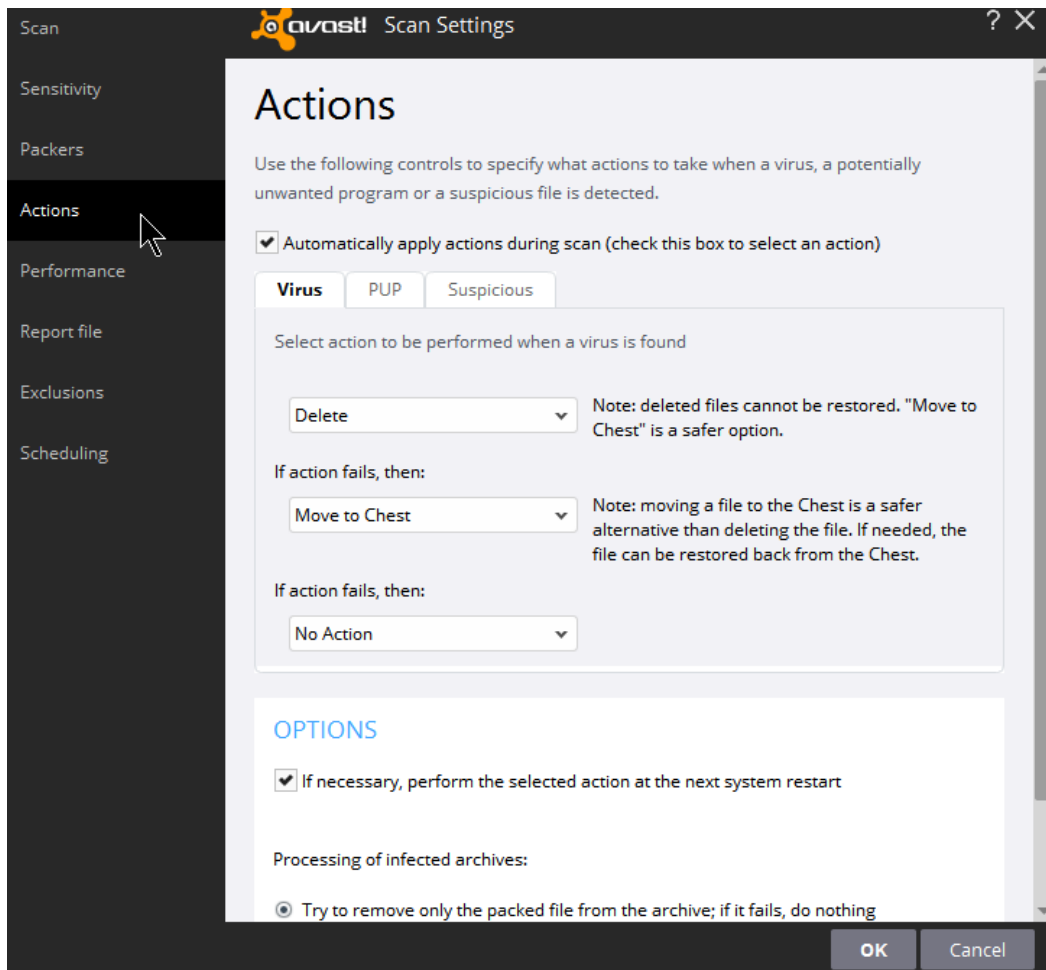

Follow links during scan

OK

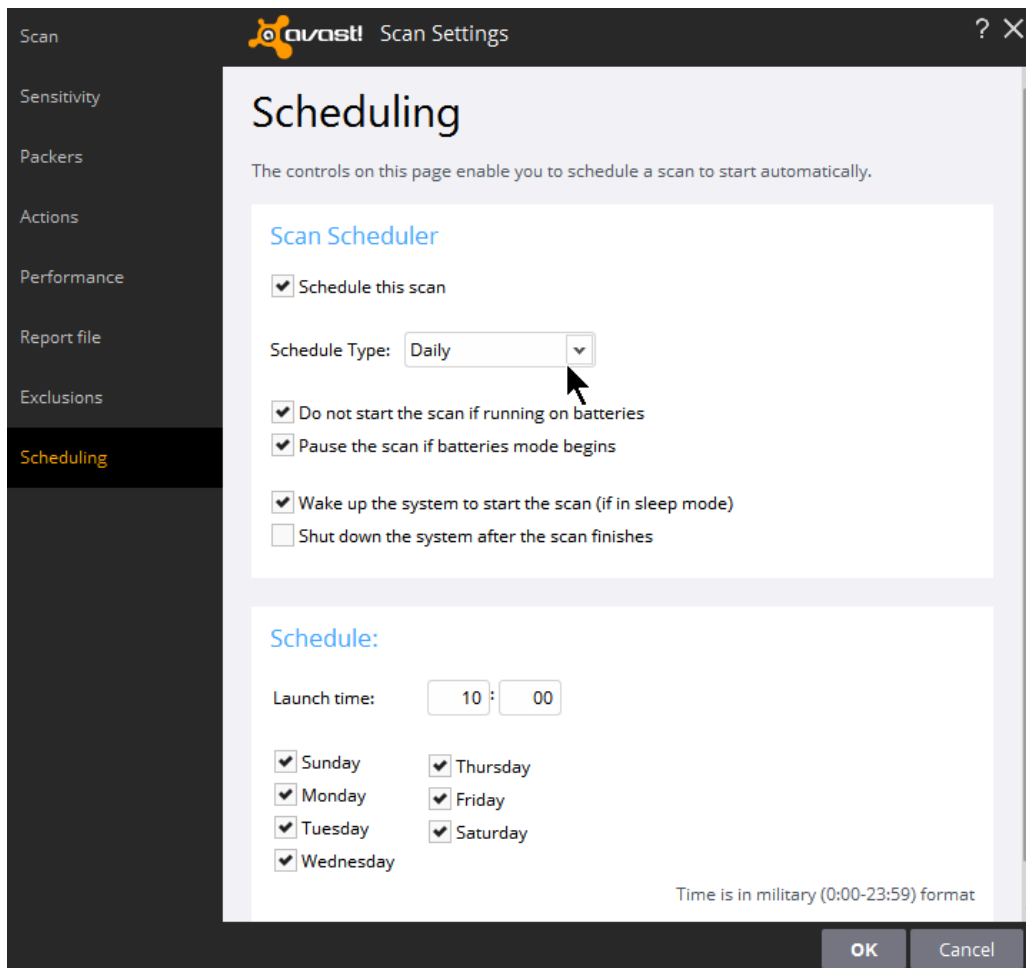

Cancel

On the next screen there are 3 tabs ... virus tab, PUP tab, and Suspicious tab
On virus tab: first drop down should be delete and second should be move to chest
On PUP tab: first is move to chest and second is delete
On Suspicious tab: only one move to chest

Skip the next 3 screens.... Performance, report file, exclusions and go to scheduling.

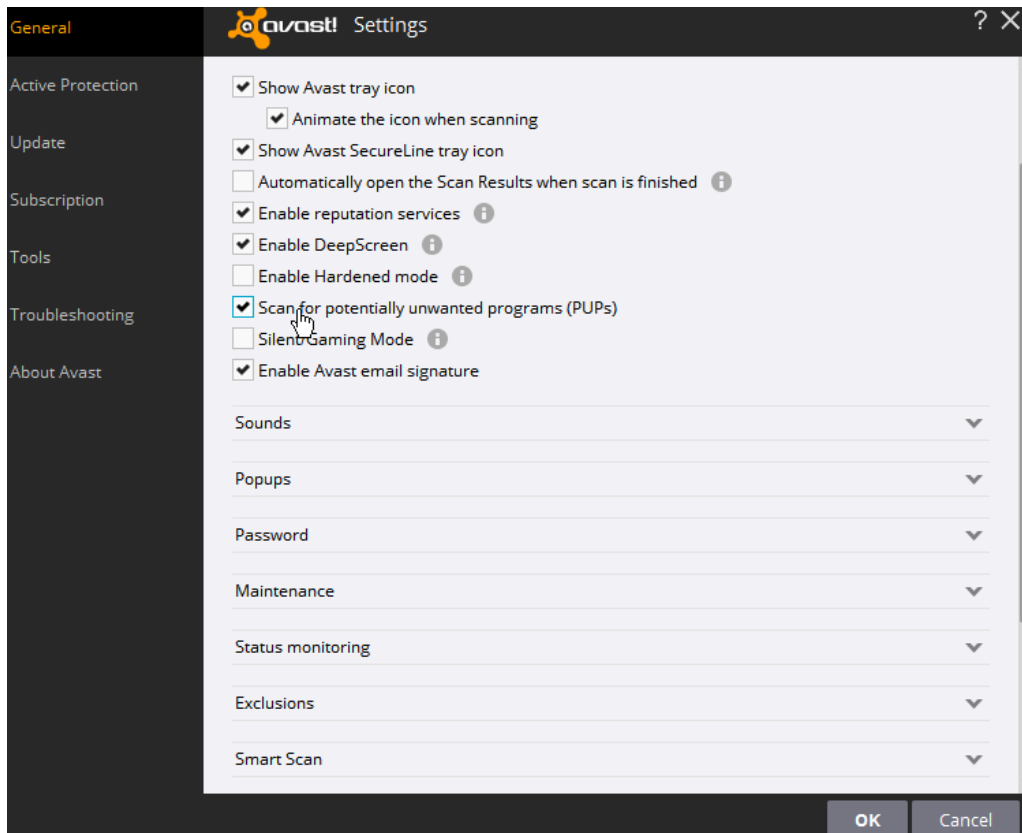

Click ok.

Next tweak:

Back on main Avast screen click the gear in the upper right corner.

Click on “scan for PUPS” then scroll down to smart scan directly below where you clicked that.

To get in the smart scan click the arrow on the right side straight across from the words smart scan
Then click customize...then repeat the first 4 steps in here up to the scheduling screen above and click ok
then you're done.
